WOUND CARE INSTRUCTIONS

Wound Care:

- Remove dressing 24 – 48 hours after surgery unless otherwise instructed
- Wash area with soap and water or shower; do not soak surgical sites (no pools, hot tubs, lake water, or dish water) for two weeks. *Do not use peroxide or alcohol to clean the wounds.*
- Dry surgical site by gently pat drying with clean towel or allow to air dry
- Apply Polysporin ointment (plain – not triple care) and cover area with bandaid or other clean dressing; allow wound to be uncovered and without ointment for 2-4 hours daily
- Take any antibiotics prescribed at the appropriate time schedule until completed
- Anti-Pain medication can be taken after surgery; local anesthetic usually lasts 4-6 hours
- Elevate the surgical site above the level of the heart if possible to reduce swelling and pain
- Resume any prescribed medications unless otherwise stated
- Continue steps 2-4 until stitches are removed (generally 3-5 days for facial stitches, 14 days for feet; and 10-14 days for all other areas)
- Bruising or swelling can occur and is normal; it is ok to use ice wrapped in a towel to reduce swelling
- Bleeding or oozing of blood from the surgical site may occur following surgery – if it occurs hold constant firm pressure for 10 minutes with a clean towel. If bleeding persists see emergency care below.
- One week after stitches are removed begin to massage scar with hand or body lotion (Vaseline creamy) or BioOil (do not use vitamin E)
- One week after stitches are removed, if surgical site is exposed to the sun, apply sunscreen SPF 45 or higher for at least one year to prevent scar from tanning
